

## 4.3.5. Serious and individual threat: assessment of personal circumstances

### COMMON ANALYSIS

Last update: May 2024

In the context of the ‘sliding scale’, each case should be assessed individually, taking into account the nature and intensity of the violence in the area, along with the combination of personal circumstances present in the applicant’s case. It is not feasible to provide exhaustive guidance about what the relevant personal circumstances could be and how those should be assessed.

The text below provides some indications concerning possible considerations and the nature of the assessment. The assessment should take into account the personal circumstances of the applicant as a whole. Depending on the situation in the region of origin, different circumstances may be particularly relevant.

#### Indiscriminate violence, examples of relevant personal circumstances

- **Age:** when assessing the risk of indiscriminate violence, this personal circumstance would be of particular importance in relation to the ability of the person to assess the risks. For example, incidents of children becoming victim of explosive remnants of war continue to be documented in recent reports. Children may also not be in a position to quickly assess a changing situation and avoid the risks it entails. In some cases, elderly age may also impact the person’s ability to assess and avoid risks associated with an armed conflict.
- **Gender:** when assessing the applicability of Article 15(c) QD, it is difficult to ascertain whether and in what circumstances men or women would be at a higher risk in general. It would also depend on other factors, such as the nature of the violence in the area. For example, men may be at higher risk of violence targeting public places, as men are the ones more frequently being outside the home and visiting such locations. On the other hand, general gender norms in Afghanistan suggest that women may have less information regarding the current security situation and the associated risks. Moreover, if the violence moves closer to the residence of people, e.g. in the case of ground engagements in populated areas, women would have a more limited ability to avoid it. In the cases when they do have the ability to assess and anticipate the risk, women and girls may also be limited in their ability to avoid the violence, as they need to be accompanied by a close male relative in order to travel within the country.
- **Health condition and disabilities, including mental health issues:** serious illnesses and disabilities may result in restricted mobility for a person, making it difficult for them to avoid immediate risks and, in the case of mental illnesses, it can make them less capable of assessing risks. In other cases, such conditions may require frequent visits to a healthcare facility. The latter may have different implications related to the assessment of the risk under Article 15(c) QD. Taking into account road security in some areas, this may increase the risk of indiscriminate violence as the person would be required to travel. It may also increase the risk when healthcare facilities themselves are reported to be used as a base by an armed group and targeted. Moreover, if healthcare facilities are damaged and

closed because of fighting, such an applicant may be at a higher risk due to the indirect effects of the indiscriminate violence as they would not be able to access the healthcare they need.

- **Economic situation:** applicants in a particularly dire economic situation may also be less able to avoid the risks associated with indiscriminate violence. They may be forced to expose themselves to risks such as working in areas which are affected by violence in order to meet their basic needs. They may also have less resources to avoid an imminent threat by relocating to a different area.
- **Knowledge of the area:** when assessing the risk of indiscriminate violence under Article 15(c) QD, the relevant knowledge of the area concerns the patterns of violence it is affected by, the existence of areas contaminated by explosive remnants of war, etc. Different elements may contribute to a person's knowledge of the area. It can relate to their own experience in the specific area or in areas similarly affected by indiscriminate violence, or to their connection to a support network which would ensure they are informed of the relevant risks.
- **Occupation and/or place of residence:** the occupation and/or place of residence the person is likely to have when they return to their home area may also be relevant to assess the risk under Article 15(c) QD. It may, for example, be linked to the need for the applicant to frequent locations known to be particularly targeted by armed actors (e.g. in Hazara-dominated areas in large cities).

Individual elements related to the above can exist in combination. Other factors may also be relevant.

It is not feasible to provide general guidance on which individual circumstances would be sufficient to substantiate a real risk under Article 15(c) QD in areas with high level of violence compared to areas where the violence is considered to not be at a high level. Each case should be assessed individually.
