

## 5.3.3. Indiscriminate violence

COMMON ANALYSIS | Last update: December 2025

The common analysis regarding the degree of indiscriminate violence combines quantitative and qualitative elements in a **holistic and inclusive assessment which cannot exclusively depend on a minimum number of civilian casualties and deaths in the country of origin**.

For more information on the methodology and indicators used to assess the level of indiscriminate violence in country guidance documents, see '[EUAA, \*Country Guidance: Explained\*, February 2025](#)'.

It should, furthermore, be noted that the COI used as a basis for this assessment cannot be considered a complete representation of the extent of indiscriminate violence and its impact on the life of civilians. Concerns with regard to underreporting should be underlined.
